Prominent Russian journal founded in 1963; publishes original papers and reviews in high-temperature thermal physics; reflects trends in thermal physics, presenting results of contemporary experimental investigations.

High Temperature (Teplofizika Vysokikh Temperatur), founded in 1963, is a prominent Russian physical engineering journal. Coverage includes properties and processes in low-temperature plasmas; thermophysical properties of substances including pure materials, mixtures and alloys; phase equilibria; heat and mass transfer phenomena in particular by forced and free convections, boiling and condensation processes, radiation and complex heat transfer; methods and instruments of experimental techniques; high temperature installations and equipment for power engineering applications and more.

The journal publishes original papers and reviews in high-temperature thermal physics, by Russian and international researchers. It reflects trends in thermal physics, presenting the results of contemporary experimental investigations; studies in the numerical simulation of complex thermal, gas-dynamics, and heat-and-mass-transfer processes; and the latest achievements in the theoretical description of the properties of high-temperature media.
